PSYC 1101 is our ENTRY foundational course and is a pre-requisite for all other PSYC Courses

PSYC 1101 – General Psychology (3 hrs.)

Here, when, and why did people begin investigating human cognition and behavior? Get an introduction to the major problems and issues in psychology, including human development, learning and memory, perception, emotion, personality, and stress. This class is essential for anyone interested in understanding the science of the human mind.

PSYC 2015 – Research Methods (4 hrs.)

How do we design experiments? This class provides an introduction to the major issues in designing, analyzing, and publishing research. Students will learn about the ethical principles of research including, what is and what is not possible in human psychological research, and the different quantitative and qualitative approaches.

PSYC 2020 – Psychological Statistics (4 hrs.)

In every class I have ever taught, there are people who, when they meet someone with a certain first name, have a negative first impression of that person. How do emotions come about? How do we learn to associate emotions with objects and events? How do emotions influence our thoughts and behaviors? This class provides a fundamental understanding of major issues in designing, analyzing, and publishing research. Students will learn about the ethical principles of research including, what is and what is not possible in human psychological research, and the different quantitative and qualitative approaches.

PSYC 2210 – Social Psychology (3 hrs.)

How do we design experiments? This class provides an introduction to the major issues in designing, analyzing, and publishing research. Students will learn about the ethical principles of research including, what is and what is not possible in human psychological research, and the different quantitative and qualitative approaches.

PSYC 2220 – Industrial/Organizational Psychology (3 hrs.)

This course is essential for anyone interested in understanding the science of the human mind.

PSYC 2230 – Abnormal Psychology (3 hrs.)

How do employers select the best person for the job? How do we measure the abilities that are essential for successful performance on these tasks? How do we evaluate the validity of these tests? This class is essential for anyone interested in understanding the science of the human mind.

PSYC 4025 – Learning & Memory (3 hrs.)

This course provides an introduction to the major issues in designing, analyzing, and publishing research. Students will learn about the ethical principles of research including, what is and what is not possible in human psychological research, and the different quantitative and qualitative approaches.

PSYC 4260 – Psychology of Aging (3 hrs.)

This course provides an introduction to the major issues in designing, analyzing, and publishing research. Students will learn about the ethical principles of research including, what is and what is not possible in human psychological research, and the different quantitative and qualitative approaches.

PSYC 4011 – Cognitive Psychology (4 hrs.)

How do we design experiments? This class provides an introduction to the major issues in designing, analyzing, and publishing research. Students will learn about the ethical principles of research including, what is and what is not possible in human psychological research, and the different quantitative and qualitative approaches.

PSYC 4010 – Human Abilities (3 hrs.)

What are the limits of a person's capacity to process information when we design a machine for them to use? How do we optimize human performance? Engineering psychology encompasses the design and evaluation of human-machine systems.

PSYC 3004 – Sensation & Perception for Non-Majors (3 hrs.)

What are the limits of a person's capacity to process information when we design a machine for them to use? How do we optimize human performance? Engineering psychology encompasses the design and evaluation of human-machine systems.

PSYC 5020 – Biopsychology (3 hrs.)

What is the structure of the mammalian nervous system? How do the brain support cognitive functions like vision, movement, emotion, and memory? What is consciousness? How do emotions arise from neurons in the brain? How do emotions affect the brain and behavior? Why do drugs have many side-effects? What are some people more likely to abuse drugs than others? What are the impacts of drug use and abuse on society and culture? This course provides an introduction to the major issues in designing, analyzing, and publishing research. Students will learn about the ethical principles of research including, what is and what is not possible in human psychological research, and the different quantitative and qualitative approaches.

PSYC 5011 – Physiology of Aging (3 hrs.)

This course provides an introduction to the major issues in designing, analyzing, and publishing research. Students will learn about the ethical principles of research including, what is and what is not possible in human psychological research, and the different quantitative and qualitative approaches.

PSYC 5010 – Biobehavioral Pharmacology (3 hrs.)

This course provides an introduction to the major issues in designing, analyzing, and publishing research. Students will learn about the ethical principles of research including, what is and what is not possible in human psychological research, and the different quantitative and qualitative approaches.
